General characteristics of the major

Basic information

Faculty name:	Faculty of Mechanical Engineering and Robotics
Major name:	Mechatronic Engineering with English as instruction language
Level:	First-cycle (engineer) programme
Profile:	General academic
Form:	Full-time studies
ISCED classification:	
Number of ECTS credits necessary to complete studies at a given level:	210
Professional title awarded to graduates:	inżynier
Cycle start date:	2019/2020, winter semester
Duration of studies (number of semesters):	7

Field of science to which the major is assigned:

Field engineering and technical sciences

Discipline of science to which the major is assigned:

Discipline	Percentage	ECTS
Mechanical engineering	68%	143
Automation, electronics and electrical engineering	23%	48
Technical computing and telecommunications	9%	19

Relationship between the major and the AGH UST development strategy and the AGH UST mission

In the Mission Statement of the University, there is emphasis placed on the creation of modern education courses, which follow worldwide trends and which support the national economy through the supply of highly-qualified engineers. Mechatronic Engineering is such a course as defined in our educational objectives. Program educational objectives are aimed at preparation of graduates for work in industry, design offices as well as research and development.

The education system in AGH is aimed at educating students in logical, constructive and forward thinking skills, making reasonable decisions and fast and accurate conclusions, and is in full accordance with the aims of education accepted for Mechatronic Engineering, and can be seen in the social skills and competencies set in the program objectives.

The next point of the current mission of the University and the objectives of Mechatronic Engineering is cooperation with other educational and industrial institutions in the country and abroad, which is consistent with all of the program educational objectives.

The next issue is scientific research and its use in education, as mentioned in both the AGH Mission Statement and in the educational objectives of Mechatronic Engineering.

Information on taking into account the socio-economic demand while creating the study programme and indication of the assumed learning outcomes matching the identified demand

In the national economy of Poland, a stronger emphasis is put on a development of the high technology industry. In the country, and especially in the Małopolska region, branches of the largest global corporations are established, and domestic enterprises are created, in which there is a need for engineering staff having knowledge of modern mechanical and electronic systems design, control and programming, as well as a synergistic combination of these systems. It is in the public

interest to provide this type of professionals. In the mechatronic engineering program, students learn about the latest trends in mechatronic design using computer aided tools. They are taught the solutions used in the high technology industry.

General information about the study programme

Major: Mechatronic Engineering with English as instruction language

General information related to the study program (general learning objectives and employment opportunities, typical jobs and opportunities for graduate continuing education)

Mechatronic engineering is the interdisciplinary program composed of basic courses (e.g. mathematics, physics), major courses (e.g. mechanics, control theory, computer science, electronics) as well as of specialty courses.

Contents of major and specialty courses comprise techniques of computer aided engineering, problems of virtual prototyping, elements of modern control and basics of robotics. Students learn about methods and tools for analysis and synthesis of mechatronic systems and integration in mechatronics.

The aim of the Mechatronics engineering first cycle study program is to build the students' engineering knowledge considered as theoretical background and practical engineering problems. The study comprises laboratory and project classes where students gather practical engineering skills.

The study in Mechatronic engineering prepares to work in interdisciplinary teams that design, manufacture and/or utilize various mechatronic systems. The interdisciplinary knowledge helps the program graduates to communicate with other engineers in the course of solving the practical, complex engineering problems.

The graduates of the program are prepared to work in: design units, research and development institutions as well as in companies that manufacture or use mechatronic devices.

The graduates are also prepared to continue study at the Master level both at home University (Faculty of Mechanical Engineering and Robotics offers second level Mechatronic engineering program) and at other faculties or universities in Poland or abroad.

Program Educational Objectives:

- * Progress to a Master's studies.
- * Be employed by industry in design offices focused on mechanical or mechatronic systems.
- * Be employed by industry or academia in research and development, experimentation and testing of mechanical, mechatronic or control systems.
- * Increase their level of leadership within their respective organizations.
- * Communicate effectively and work collaboratively in multidisciplinary work environments.
- * Be committed to lifelong learning to enhance their professional knowledge.

Information on the study programme including the conclusions from the students and graduates careers monitoring

The careers of graduates are constantly monitored by the AGH Career Center. A Unit of Monitoring of Graduates Professional Development operates within the Centre aimed at job market analysis and research activities including monitoring of graduates career paths (first destination surveys). AGH UST graduates are interviewed several times after completing their studies. From these surveys, reports are prepared containing information such as the distribution of graduate employment, the strengths and weaknesses of graduates, and respondents' comments on suggested changes in the programs. These reports are then annually submitted to the authorities of the university and faculties. Based on them, changes in the particular programs and subjects are proposed. These may include the introduction of new subjects or changes to the existing ones, e.g. a change to CAD modeling software.

Information on the study programme taking into account the requirements and recommendations of the accreditation committees, in particular the Polish Accreditation Committee and industry accreditation committees

Mechatronic engineering in English is accredited by ABET. The accreditation commission did not recommend changes to the study program, but ordered to increase the emphasis on student outcome monitoring. According to the recommendations, a suitable system was developed and implemented.

Information on including examples of good practice in the study program

The Mechatronic engineering program uses combining objects into large modules, so that students would learn

comprehensively and carry out multidisciplinary projects.

Information on cooperation in the preparation of the study programme with external stakeholders, in particular associations, professional and social organizations

Within the Faculty of Mechanical Engineering and Robotics, there is a Social Board, which gathers several dozen representatives of the management staff of enterprises associated with AGH. Board members are annually surveyed for the needs and requirements of graduates of Mechatronics Engineering. The results of these surveys are then analyzed and taken into account in the creation and modification of study programs.

Duration, rules and form of the apprenticeship

As part of the studies, the student is required to complete a 4-week professional apprenticeship, during the summer break in the sixth semester of study. Each student implements the apprenticeship individually in a company of his choice, which activity is related to mechanical engineering, mechatronics or manufacturing engineering. The most important companies with which the department cooperates include KGHM Polska Miedź, PZL Sp. z o.o., KHW S.A., WOLFRAM, CDM Smith Sp. z o.o., EMT-Systems Sp. z o.o., KIRCHHOFF Polska Sp. z o.o.

Admission criteria, rules and policies

Major: Mechatronic Engineering with English as instruction language

Description of competences expected from the candidate applying for admission to studies

Finished secondary school with certificate sufficient to enrol in any university in the country where the certificate was issued.

Recruitment conditions, including the winners and finalists of the central level high school scientific Olympics, as well as winners of international and national contests

Recruitment is conducted in accordance with the annual Resolution of the Senate

The expected limit of admissions to studies along with an indication of the minimum number of admitted candidates required to successfully launch a study cycle

Minimum number of students: 15

Maximum number of students: 60

ECTS credits calculations

Major: Mechatronic Engineering with English as instruction language

The total number of ECTS credits the student needs to obtain in the form of:

classes conducted with the direct participation of academic teachers or other persons conducting classes	191
core science classes relevant to a given major	55
practical classes, developing practical skills, including laboratory, design, practical and workshop classes	78
classes subject to choice by the student (in the amount of not less than 30% of the number of ECTS points necessary to obtain qualifications corresponding to the level of education)	64
classes in the field of humanities or social sciences - in the case of fields of study assigned to disciplines within fields other than humanities or social sciences, respectively	6
foreign language classes	5
apprenticeships	4
classes related to the academic activity conducted at the University in the discipline or disciplines to which the field of study is assigned, in the amount greater than 50% of the number of ECTS points required to complete studies at a given level, taking into account the participation of students in classes preparing to conduct scientific activity or participate in this activity (applies only to studies with a general academic profile)	144
classes shaping practical skills in the amount greater than 50% of the number of ECTS points required to complete studies at a given level (applies only to studies with a practical profile)	

Detailed rules of the implementation of the study programme established by the Dean of the Faculty (the so-called Study Rules)

Major: Mechatronic Engineering with English as instruction language

Enrollment rules for the next semester

The rules of registration for the semester are specified in paragraph 17 of the AGH UST Study Regulations

Enrollment rules for the next semester as a part of the so-called ECTS credits debt ceiling

The allowed deficiency of ECTS is:

When entering the 2nd semester – 7 ECTS

When entering the 3rd semester – 9 ECTS

When entering the semester 4th and 5th – 15 ECTS

When entering the 6th semester – 9 ECTS

When entering the 7th semester – 0 ECTS

ECTS credits debt ceiling

9

Organization of classes within the so-called blocks of classes (i.e. such organization of subjects or individual forms of classes that creates exceptions to the cyclical nature of classes in particular weeks of a given semester of studies)

In the first-cycle studies of Mechatronic engineering, there are no blocks

Monitoring semesters

3, 6

Study rules in case of the individual organization of studies approved for a specific student

Individual studies are conducted under the scientific supervision of an academic teacher with DSc. or Prof. scientific title. Possibility to start the studies from the 4th semester. The required average grade from the completed semesters at least 4.5, it is advisable to have additional achievements (publications, work in a research club, social activities, awards, distinctions). An individual study program may consist of modules included in approved study plans and individual unapproved modules. The program of unapproved individual modules is approved by the Faculty Council. The study program is approved by the Dean.

Implementation of apprenticeships including monitoring system and completion rules

In order to complete the apprenticeship student should prepare:

- * letter of recommendation,

- * draft of the Agreement on the apprenticeship or draft of the Agreement on the unpaid apprenticeship.

All necessary documents are confirmed by the Dean's Representative for student apprenticeships.

Passing the apprenticeship is carried out by the program or profile tutor, or his / her attorney for apprenticeships on the basis of a certificate of attendance and a report on the apprenticeship.

Rules of elective modules taking

The principles of electivity of the subjects are defined in the Syllabus of Mechatronic Engineering program

Rules of study paths, diploma paths, specialty choice/eligibility

In the first-cycle studies of Mechatronic engineering, there are no paths, profiles and specialties.

Rules related to the preparation of diploma projects and theses as well as the implementation of the degree granting

The final thesis preparation and diploma awarding process is carried out in accordance with the paragraphs 25, 26 and 27 of the AGH UST Study Regulations.

Students take the diploma exam, prepare and defend the degree thesis.

Principles for determining the overall evaluation of graduation (the final grade)

The general result of graduation is calculated as the sum of: $0.6 * \text{the average of grades obtained during studies} + 0.3 * \text{final grade of the diploma thesis} + 0.1 * \text{grade of the diploma exam}$.

Other requirements related to the implementation of the study programme resulting from the AGH UST Study Regulations or other regulations in force at the University
